

Design Comments: I designed Wendigo to be a sort of side-grade of Shang-Chi. It is meant to be a disruption card that targets locations being dominated by one or two high-power cards. However, it can also be used to turn off strong abilities, like Onslaught or Doom 2099. Because this is a very powerful and potentially annoying effect, Wendigo is meant to be balanced by a few factors. First, his ability only procs at the start of each turn, meaning you cannot play it on turn 6 and swing a location. Secondly, he targets a random enemy card, meaning the opponent can play around this effect by stacking smaller cards on a location with a big body. Thirdly, he has 4 Power, meaning it is actually possible to buff an opponent's weak card if played poorly. However, this also means that a smart player can purposely play small units at a location, then once Wendigo procs, the enemy Wendigo will transform one of your small units into a 4-Power card. An interesting idea is to actually buff your Wendigo and utilize its mirrored effect to power up your units.

Design Comments: To represent Proteus' ability to take over bodies and become stronger, I designed him as a relatively weak early game play with a huge payoff later on. Proteus is able to be played in 2 types of decks. Firstly, with cards that thin out your deck, like Thor, Blob, etc. In these decks, Proteus presents a powerful late game play. However, the opponent will know the buffed Proteus is coming, providing an interesting dynamic where they pay choose to go wide instead of stacking one location and being vulnerable to the buffed Proteus. Secondly, because Proteus replaces the bottom card with a COPY of himself, there could be an interesting Arnim Zola Proteus buff deck focused on hand buffing him before slamming down an even more buffed up version on turn 6. The benefit of using Proteus in this deck over say, a Black Panther, is that he only costs 3 energy, meaning on turn 6 you could play other combo pieces as well.

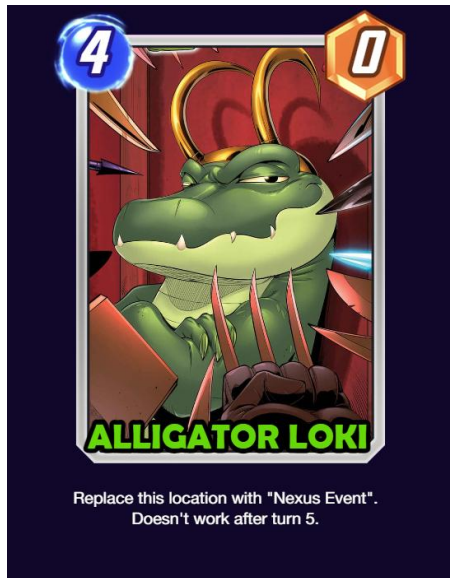

Design Comments: I wanted to explore the idea of an inexperienced speedster who is too fast for their own good. Gameplay-wise, Blur should be a strong addition to move-decks, though it requires foresight and planning from the player. If played on turn 3 on the left-most location, Blur is guaranteed to destroy itself at the start of turn 6. This means the player has two options: if they have move support cards, they can play Blur on 3 and move him back to the left location before he destroys himself. Otherwise, players can simply play him on turn 4. In the end, Blur will often times be a 3/8, but this premium statline is balanced by the support needed to make Blur work as well as the fact that the opponent can generally predict where Blur will be. Important to note, Blur will also destroy itself if the location he is trying to move to is full.

Design Comments: The Beyonder's effect is supposed to reflect his control over timelines and different realities. Gameplay-wise, Beyonder is meant to be a strong addition to discard decks. With its effect, the player can choose what cards to discard before they even enter their hand, helping them setup a strong Hela or Ghost Rider. Notably, this effect is one of the few cards that require player choice outside of where to place a card, so it might be violating a design principle. However, I think the choice to draw a card and discard the other is an interesting dynamic and because it only happens once per turn, it shouldn't be too clunky for the player.

Note: Alligator Loki is not intended to return to the player's hand from Nexus Event.

Design Comments: Nexus Event is meant to be a unique location that can only be spawned by Alligator Loki. It's meant to have a similar role to Professor X, since playing Alligator Loki at a winning location "locks" it down for you. However, Nexus Event has versatility in the fact that both players CAN choose to play those cards elsewhere, creating a mind game where you have to decide whether to give up on Nexus Event or place the cards back there, hoping your opponent doesn't. Also, could be a good addition to bounce decks. It also has a very strong combo with Mobius, which may be too powerful and the interaction would have to be monitored carefully.

Design Comments: Mad Jim Jaspers is meant to provide an alternative win condition for On Reveal decks. While he would normally be pretty weak, as most decks won't have that many cards remaining at the end of the game, I can see him being powerful in Arishem or Thor style decks. I intend for the wording of this card to mean that HE acts as the one who triggers the On Reveal, meaning that his power would be doubled if there is a Black Panther in your deck for example. Notably, the fact that he doesn't have an On Reveal means he will not be triggered by Wong.
